

Make IT Your Competitive Advantage

OST Managed Backup as a Service takes the worry off your team so they can focus on driving value.

OSTUSA.COM

Companies must constantly innovate to engage with customers, differentiate themselves in the marketplace, increase operational velocity, and reduce costs. But successfully executing these projects can be difficult.

One common roadblock businesses face is overwhelmed IT teams who are bogged down performing highly important and highly skilled tasks that don't deliver competitive advantages. These activities "keep the lights on" but don't drive new business value.

Managed Backup as a Service (MBaaS)

Procuring, building, managing, and updating data storage and backup solutions provides minimal competitive advantage and requires little knowledge of your business operations. Relieving this time-consuming, costly burden can free up your experts to drive greater value.

Our MBaaS offering is built to help companies leverage their talent to achieve more. From single offices to global enterprises, our MBaaS experts can evaluate your unique needs and deliver a tailored solution for your business.

BENEFITS OF MBaaS

End-to-End Encryption

- Securely and safely back up your data so it's continuously protected.
- Data at rest is protected with 256-bit AES encryption and SSL encryption when in transit.

Back Up What's Important. Restore It When You Need It.

- Effectively securing and backing up your data doesn't need to be complicated. Our flexible solutions seamlessly integrate with your current environment.
- Backups for physical and virtual machines; Windows, Linux, and Mac OS; SQL and Exchange; Hyper-V, VMware, VirtualBox, and RAW; file, folder, image, and system state; and more.

Clear Onboarding and SLAs

- With our expert support and clear service level agreements, you can stop worrying about IT and focus on what's important to your business.
- Managed onboarding ensures your work is done right the first time and that OST can deliver on recovery time objectives, recovery point objectives, and other key backup goals.

Managed Backup as a Service

How Does MBaaS Work?

Our team installs remote monitoring, management, and backup solutions into your physical or virtual environment. A technical expert configures the management and orchestration engine based on your policies. Next, the first set of data is copied, encrypted, and sent into a cost-effective storage environment.

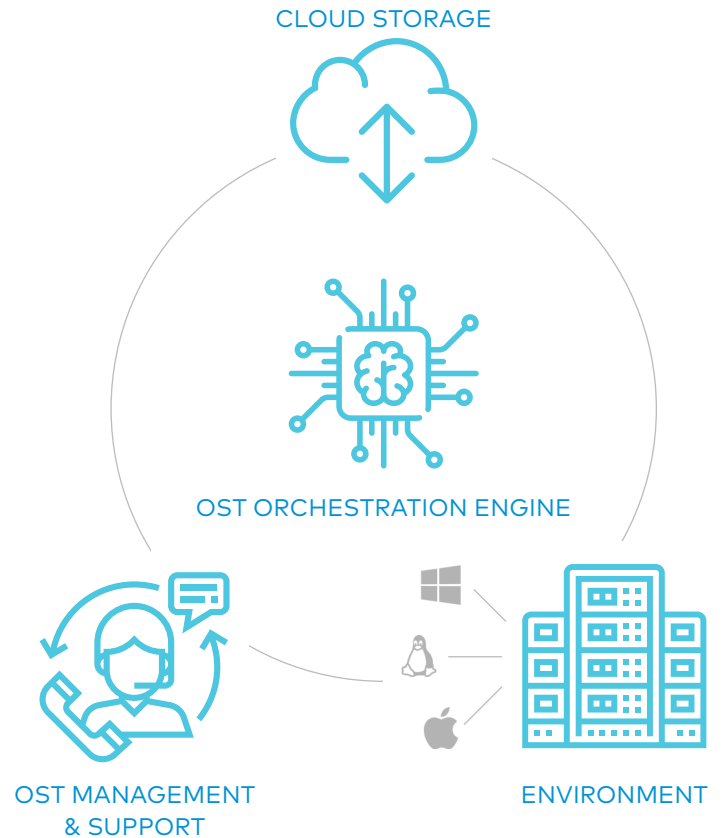

From there, continuous incremental backups can cater to your specific recovery needs. Our MBaaS solution can also maintain your backups for as long as necessary, and we can test recovery at any frequency you desire.

What Does Onboarding Look Like?

OST delivers a first-class onboarding experience. You'll work with a dedicated project manager and technical team through 4 key phases of implementation:

1. Planning and Policy Documentation
2. Toolset and System Implementation
3. Testing and Validation
4. Go Live

Once your MBaaS solution is live, OST will schedule recurring check-ins to ensure your most important needs are always being met.

Options
